EVENTS AND SOCKET.IO

HTTP, PART 2

Sequels are always worse than the original

♦ FULLSTACK 2 EVENTS AND SOCKET.IO

WHAT WE KNOW ABOUT HTTP

- A client makes a "request" to a server
- Server receives this "request" and generates a "response"
- One request, one response: them's the rules
- Requests can include a body (payload)
- Responses can include a body (payload)

EVENTS AND SOCKET.IO

LIVE WORLD CUP COVERAGE

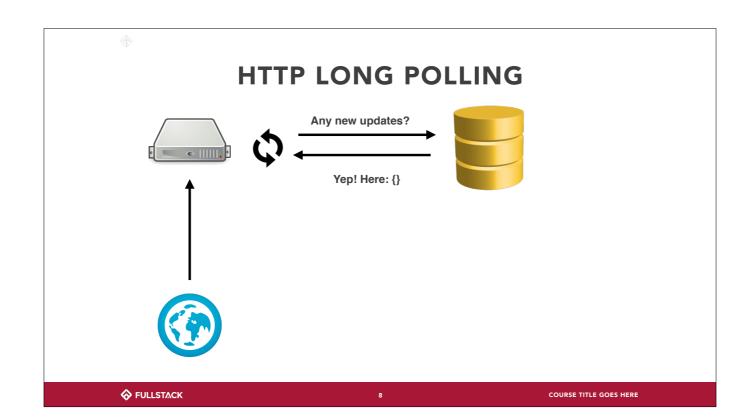

- A user visits a web page
- This web page has a live updating list of game coverage ("events") provided by New York Times commentator ("Brazil receives yellow card"/"Germany scores goal")
- When the event line is submitted by the commentator, it should immediately display to the user

HTTP LONG POLLING Any new updates? No. No. COURSE TITLE GOES HERE

HTTP LONG POLLING Any new updates? Yep! Here: {}

♦ FULLSTACK

COURSE TITLE GOES HERE

HTTP IS A REQUEST/RESPONSE PROTOCOL

- Clients must send a request before the server can issue a response
- There is no way for the server to push data to the client without an outstanding request
- No live updates without long polling
